

Kaung Khant Hein

Full Stack & Mobile Engineer

0378320387 | kaungkhantheinkkh2003@gmail.com | Ngu Hanh Son, Da Nang, Vietnam

Portfolio: kaungkhanportfolio.netlify.app | GitHub: github.com/kaungkhanthein1

PROFILE

Full stack and mobile engineer focused on React Native, React, TypeScript, Node.js, and PostgreSQL. Builds and ships production apps end to end, from database schema to deployed mobile and web clients.

WORK EXPERIENCE

Frontend Web Developer, DevelopX

02/2025 – 12/2025

- Built the core frontend with React 18 and Vite, keeping builds fast and rendering optimized
- Added real-time location discovery with the Google Maps API and Leaflet.js
- Rolled out EN/JA/KO/ZH support with i18next, including full routing and layout alignment
- Built tab-based navigation with Framer Motion transitions and a favorites system for saving and renaming places
- Managed global and async state with Redux Toolkit and React Query
- Delivered a responsive, mobile-first UI with PWA support and custom Tailwind components
- Worked directly with the backend team on API contracts and error handling

Online Customer Service & E-Commerce Data Entry, Anycall Mobile

01/2024 – 10/2024

- Handled customer support across Facebook, Messenger, and phone channels
- Kept product listings and inventory data accurate; produced daily and weekly KPI reports
- Trained a junior staff member on Messenger automation and order tagging
- Managed refunds and escalations directly with customers

PROJECTS

Apple Things — Full-Stack E-Commerce Platform

Multi-language e-commerce app with a React Native mobile client and a Medusa.js backend on PostgreSQL, containerized with Docker.

- Designed the PostgreSQL schema and built the Medusa.js backend, running locally through Docker
- Structured the mobile app with an atomic component hierarchy and a services/hooks layer for business logic
- Wired push notifications end to end using Firebase Cloud Messaging and Notifee, triggered from Medusa events
- Built an offline-friendly wishlist with MMKV local storage, English/Myanmar i18n, and dark/light/system theming

NextBite — White-Label Multi-Tenant QSR App

Multi-tenant ordering platform for restaurant brands, with a Go REST API backend and a React Native Expo frontend.

- Built the Go backend from scratch: API routes, request/response schemas, and database models
- Designed the multi-tenant data model so one backend serves multiple restaurant brands
- Built the React Native Expo app with brand-specific theming, navigation, and ordering flows
- Owned the project from requirements through database design to deployment

EDUCATION

Computer Science (Year 1), University of Computer Studies Mandalay — 2019 – 2020

English Language Certificate, B1+ Upper Intermediate — The Space Language Center

SKILLS

Mobile: React Native (CLI & Expo), TypeScript, MMKV, Notifee, Firebase Cloud Messaging, i18n

Web / Frontend: React 18, Next.js, JavaScript (ES6+), Tailwind CSS, SCSS, React Hook Form, Framer Motion

Backend & Database: Go, Node.js, REST APIs, Medusa.js, PostgreSQL, Docker

Tools & Workflows: Git, GitHub, Figma, VS Code, ESLint, Vite, React Testing Library, Cypress
